## Complete Questions on a SEPERATE pice of paper...SHOW ALL WORK!!

KINETIC AND POTENTIAL ENERGY WORKSHEET Name:

	Remember, kinetic energy is the energy of motion and potential energy is stored energy due to an object's shape or position. Then, choose the correct formula to use:  Kinetic Energy = ½ × mass × velocity²  (in Kg) (m/s)  For each problem, write the formula used, show your work, & write your answer with correct units.  Example:  An 80kg man is jogging at a rate of 4m/s. He has kinetic energy. Calculate it:  Kinetic Energy = ½ × mass × velocity²  Kinetic Energy = ½ × 80kg × (4m/s)²  Kinetic Energy = ½ × 80 × 16  Kinetic Energy = 640 J
Ek 1	. You serve a volleyball with a mass of 2.1 Kg. The ball leaves your hand with a speed of 30m/s. The ball as energy. Calculate it. (945 Joules)
	a. A baby carriage is sitting at the top of a hill that is 21 m high. The carriage with the baby weighs 12 kg. The carriage has energy. Calculate it. (2469.6 Joules)
	. A car is traveling with a velocity of 40 m/s and has a mass of 1120 Kg. The car has nergy. Calculate it. (896 000 Joules)
	. A cinder block is sitting on a platform 20 m high. It weighs 79 Kg. The block has nergy. Calculate it. (15 484 Joules)
Ep 5	There is a bell at the top of a tower that is 45 m high. The bell weighs 190 Kg. The bell has energy. Calculate it. (83 790 Joules)
Ep 6	. A roller coaster is at the top of a 72 m hill and weighs 966 Kg. The coaster (at this moment) has energy. Calculate it. (681 609.6 Joules)

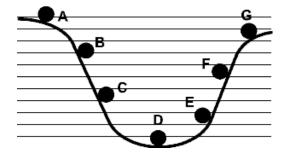

7. Determine the amount of potential energy of a 5.0Kg book that is moved to	three different
shelves on a bookcase. The height of each shelf is 1.0 m, 1.5 m, and 2.0 m.	(49 Joules)

(73.5 Joules)

(98 Joules)

- 8. You are on in-line skates at the top of a small hill. Your potential energy is equal to 1,000. J. The last time you checked, your mass was 60.0 kg. [Formula Re-arangemnt]
  - a. What is the height of the hill?
  - b. If you start rolling down this hill, your potential energy will be converted to kinetic energy. At the bottom of the hill, your kinetic energy will be equal to your potential energy at the top. Calculate your speed at the bottom of the hill.
- 9. (BONUS!!) A 1.0-Kg ball is thrown into the air with an initial velocity of 30. m/s.
  - a. How much kinetic energy does the ball have?
  - b. How much potential energy does the ball have when it reaches the top of its ascent?
  - c. How high into the air did the ball travel?
- 10. What is the kinetic energy of a 2,000.-Kg boat moving at 5.0 m/s? (25 000 Joules)

This graph shows a ball rolling from A to G. The ball starts at point A and rolls to point G.

- 11. At what letter does the ball have the greatest kinetic energy? \_\_\_\_\_
- 12. Which letter shows the ball when it has the maximum potential energy? \_\_\_\_\_
- 13. Which letter shows the ball when it has the least potential energy?
- 14. Why is point G slightly lower than point A? In other words, why couldn't the ball go back to the same height at which it started?
